Fully functional

Patch Manager Plus

Patch Manager Plus is an automated patch management solution which helps IT administrators keep away vulnerabilities and malware by applying patches of Windows, Mac, Linux and third-party applications in time.

5-processes-in-1 Patch Manager Plus

- ▶ Scan the computers
- ▶ Download missing patches on to server
- ▶ Test and approve the patches
- ▶ Configure the deployment policies.
- ▶ Automated deployment

How does Patch Manager Plus distinguish from its competitors?

- ▶ Support for over 300+ third-party applications
- ▶ Multi platform support - Windows, Mac and Linux(on-premise edition)
- ▶ Availability as on premise and on the cloud
- ▶ Pre-test and approve patches before deployment
- ▶ Keep your travelling users up to date
- ▶ Decline patches and disable auto-update of patches
- ▶ Vulnerability prompt messages for critical patches
- ▶ Agent based monitoring of system health of computers
- ▶ Wake on LAN to deploy patches & remote shutdown
- ▶ Customized, granular reports for IT auditing
- ▶ Security news feed about the latest vulnerabilities

Key Features of Patch Manager Plus

Automated patch management

Accelerates patching and saves time by automating all patch management activities, thus patching multiple endpoints in minutes.

Cross-platform support

Supports patching heterogeneous OS platforms(Windows, Mac and Linux) and 300+ third-party applications.

Customized Deployments Policies

Allows customizable deployment settings to minimize disruption to end users' business operations.

User friendly interface

An easily navigable, web-based interface and help documents to guide you through every step of patching.

Achieve compliance

Helps achieve 100% compliant status by quickly identifying, assessing vulnerabilities, and automatically applying updates.

Dynamic Monitoring & Reporting

Vulnerability monitoring, remediation and reporting all from a single point of console.
